Data Types

- 2D images
- 3D images
- Clinical
- Pathological
- Ethnicity
- Deprivation

2D

- **4 images** per screening event (2 views of each breast - medio-lateral oblique & cranio-caudal)
- Each case may include images from **multiple screening events**
- **3-year intervals** between screening events

3D

- DBT images are typically taken **2-4 weeks** after the initial screening event
- Number of DBT images **varies per case**: some may have 2 views of each breast, the majority are **single breast views**
- Each DBT case will include the **2D images** from **prior screening events** for that client
- DBT images **do not** have expert annotations
